

Booleans and Conditionals - Solution 1

Note: Code copied from PDF files may have some spaces and blank lines removed. The original formatting is preserved in the code files in the zip archive linked at the beginning of the course.

```
#!/usr/bin/env python3

# Ask for the distance.
distance = input('How far would you like to travel in miles? ')

# Convert the distance to an integer.
distance = int(distance)

# Determine what mode of transport to use.
if distance < 3:
    mode_of_transport = 'walking'
elif distance < 300:
    mode_of_transport = 'driving'
else:
    mode_of_transport = 'flying'

# Display the result.
print('I suggest {} to your destination.'.format(mode_of_transport))
```
