

# Tuples - Solution 1

**Note:** Code copied from PDF files may have some spaces and blank lines removed. The original formatting is preserved in the code files in the zip archive linked at the beginning of the course.

---

```
#!/usr/bin/env python3

airports = [
    ("O'Hare International Airport", 'ORD'),
    ('Los Angeles International Airport', 'LAX'),
    ('Dallas/Fort Worth International Airport', 'DFW'),
    ('Denver International Airport', 'DEN')
]

for (airport, code) in airports:
    print('The code for {} is {}'.format(airport, code))
```
